Subject: Clarification and Justification on Vessel Operational Range

Dear Sir,

We would like to thank the Pakistan Navy for the opportunity to participate in the tender process.

This letter serves to clarify the operational range stated in our standard product brochure and specification documents.

Our published brochure indicates an operational range of approximately 300 nautical miles (Nm). This figure is based on the standard vessel configuration equipped with triple 350 HP outboard engines ($350 \text{ HP} \times 3$), operating under normal mission profile and cruising conditions.

For the Pakistan Navy tender requirement, the vessel configuration is specified with triple 300 HP outboard engines ($300 \text{ HP} \times 3$). With the reduced engine horsepower, the vessel achieves lower fuel consumption at economical cruising speed, resulting in improved fuel efficiency and extended operational endurance.

Based on our preliminary performance estimation and fuel consumption analysis, the vessel is capable of achieving an operational range of up to 600 Nm under the following conditions:

- Economical cruising speed
- Optimized load distribution
- Standard sea state and weather conditions
- Mission profile optimized for endurance operation

Therefore, the standard brochure specifies 300 Nm is based on the $350 \text{ HP} \times 3$ configuration. However, the tender configuration utilizing only **300 HP** $\times 3$ engines which allow significantly improved fuel economy and supports the required operational range of up to **600 Nm**.

We trust this clarification satisfies the technical requirement and demonstrates the capability of our proposed vessel configuration.

Should further technical details or performance calculations be required, we remain ready to provide additional supporting information.

Thank you.
